# Outline :

## Part 1: The Ce-Fe-Si ternary system

1. the isothermal section at 900°C
2. the new compound
3. the magnetic properties of the ternary compounds
4. the electrical resistivity behavior
5. the thermoelectrical power

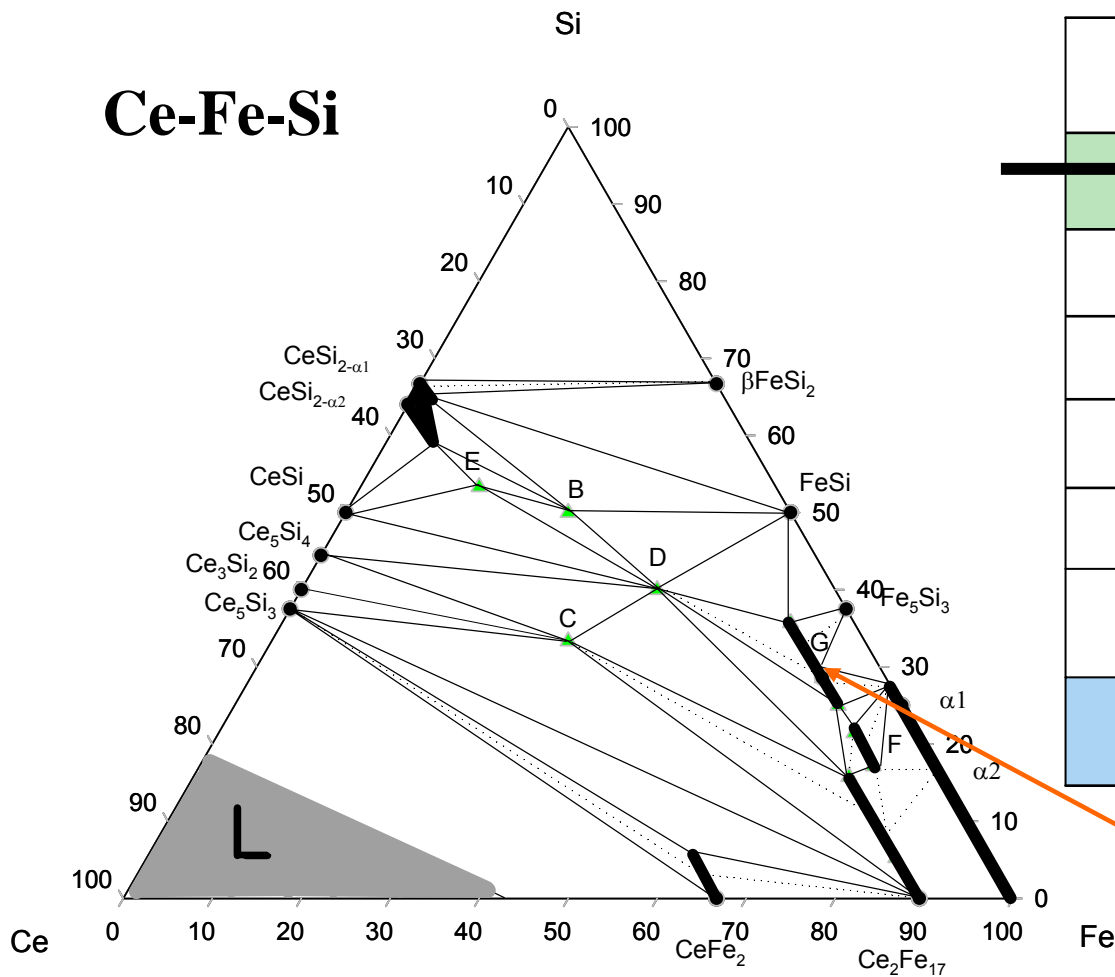

## Part 2 : the U-Fe-Si ternary system

1. the isothermal section
2. the new compounds and their electronic properties
3. transport properties of the ternary compounds

## Part 3: conclusion

# Isothermal section at 900°C

## Ce-Fe-Si

Sol-X detector, monochromatized  $CuK\alpha 1$  radiation

# Crystal Structure & Magnetic behavior of $UFe_5Si_3$

$d(\text{Fe-Fe}) = 2.44 \text{ \AA}$   
 $d(\text{Fe-Fe})_{\text{iron}} = 2.48 \text{ \AA}$

Ferromagnet :  $T_c = 310(2) \text{ K}$

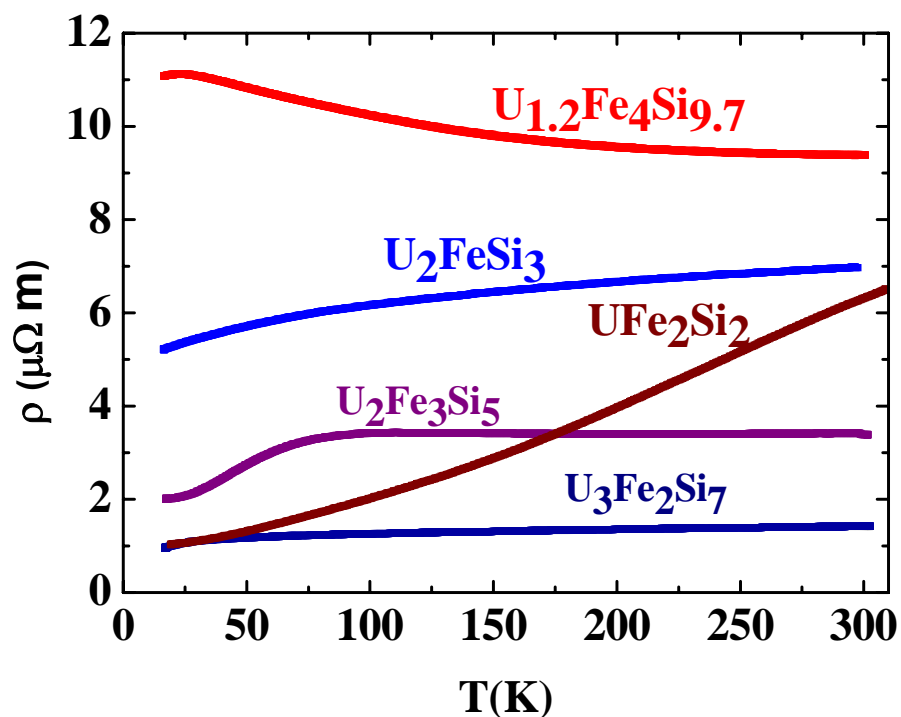

$\sigma_s = 3 \mu\text{B}/\text{f.u.}$

# *Transport properties of $UFe_5Si_3$*

- $\rho(T) = \rho_0 + AT^2$ ,  $T < 120K$
- $S(T)$  : anomaly at  $T = 70K \Rightarrow$  Kondo scattering ?

# Transport properties of U-Fe-Si ternary compounds

- metallic or semi-metallic behaviors
- modest values of the thermoelectrical power

# Conclusion : U & Ce – Fe – Si compounds

Iterant :

(Ce & U)FeSi,  
(Ce & U)Fe<sub>2</sub>Si<sub>2</sub>  
CeFeSi<sub>2</sub>,  
CeFe<sub>9</sub>Si<sub>4</sub>  
Ce<sub>5</sub>Fe<sub>2</sub>Si<sub>8</sub>,  
U<sub>2</sub>FeSi<sub>3</sub>,  
U<sub>6</sub>Fe<sub>16</sub>Si<sub>7</sub>  
U<sub>2</sub>Fe<sub>5</sub>Si<sub>3</sub>,  
U<sub>2</sub>Fe<sub>3</sub>Si<sub>7</sub>,  
UFe<sub>10</sub>Si<sub>2</sub>

partially localized :

U<sub>6</sub>Fe<sub>16</sub>Si<sub>7</sub>C  
U<sub>1.2</sub>Fe<sub>4</sub>Si<sub>9.7</sub>

U and Ce, *f* electrons hybridize with  
*s*-, *p*- or *d*- electrons of Si or Fe

metallic or semi-metallic behaviors,  
modest values of thermoelectrical power,  
(CeFeSi, 40 μV/K about 150 K)

- no simple relation between  $\rho(T)$  and  $S(T)$
- hybridization of *f* and *s*-, *p*- or *d*- electrons and  $S(T)$

**Future : Ge-compounds**

**⇒ to move the system toward localization of the *f* electrons**
